SMARTWAVE

FOR SMARTER BOATS

PRODUCT CATALOGUE

Welcome to SmartWave product guide

SmartWave boats are manufactured in New Zealand using a rotational polyethylene moulding process which produces lightweight, single piece, double skinned boats. The material is a tough, durable UV stabilised plastic.

SmartWave boats have been selling in New Zealand and abroad for over 8 years and have become a leading name in the small to medium size boat market. SmartWave boats are known for superior safety, stability and performance.

Export to global destinations means all SmartWave boats have undergone stringent international testing procedures with SmartWave achieving the standard everytime. So you can be sure when you purchase a SmartWave boat of quality and unique safety features that make SmartWave boats virtually unsinkable.

Please take your time to look through this product guide and choose the boat most ideal for your needs.

SMARTWAVE

FOR SMARTER BOATS

A person wearing a yellow life vest with "Mutchwilco" written on the back is rowing a red SmartWave 2400 dinghy on a body of water. The background shows a shoreline with trees and a grassy area.

SMARTWAVE

FOR SMARTER BOATS

SMARTWAVE

FOR SMARTER BOATS

Safety Features

When SmartWave designs a new boat there is a huge amount of focus on superior safety and stability features. Unlike single skinned hulls, rotationally moulded boats have two skins with an internal air cavity. This creates excellent bouyancy even when the boat is submerged.

The SmartWave SW3500 and SmartWave SW4000 incorporate the unique **B.I.F.F.** (Bouyancy in Filled Foam) feature, which means a certain amount of foam is pumped between the two skins. Liquid foam is pumped in then expands, creating strength and amazing bouyancy.

SmartWave boats are made with your safety in mind, so when you purchase a SmartWave you can be sure you're buying one of the safest boats available.
